New vectors comprising operably linked DNA fragments having an origin of replication, a selectable marker and a chimeric DNA construct, useful for silencing target nucleic acids and for producing large amounts of doublestranded RNA.

Claim 13; Page 62-72; 104pp; English.

The present invention describes a vector (I) comprising operably linked DNA fragments having: (a) origin of replication allowing replication in a recipient cell, preferably in bacteria such as Bacherichia coll; (b) selectable marker region capable of being expressed in the recipient cell; and (c) a chimeric DNA construct comprising: (i) promoter or promoter region capable of being recognized by RNA polymerases of a cukaryotic cell or by prokaryotic RNA polymerase; (ii) first, second, third and fourth recombination sites, (iii) 3' transcription terminating and polyadenylation region functional in the eukaryotic cell. The first and

```
fourth recombination sites, or the second and third recombination sites are capable of reacting with a same recombination site, and preferably are identical. The first and second recombination sites, or the third and fourth recombination sites, do not recombine with each other or with a same recombination site. The vector is useful for producing large amounts of double-stranded RNA which can be used for silencing target nucleic acid sequences. The vectors can also be used to convert a DNA fragment into an inverted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breeding scheme to produce more plants with the same characteristics or to introduce a chimeric gene for reduction of the phenotypic expression of nucleic acids. The present invention

```
The present invention describes a vector (I) comprising operably linked DNA fragments having: (a) origin of replication allowing replication in a recipient cell, preferably in bacteria such as Escherichia on 01; (D) selectable marker region capable of being expressed in the recipient cell; region capable of being expressed in the recipient cell; and (c) a chimeric DNA construct comprising: (i) promoter or promoter region capable of being recognized by RNA polymerases of a eukaryotic cell or by prokaryotic RNA polymerase; (ii) first, second, third and fourth recombination sites, (iii) first, second, third and polymeration region functional in the eukaryotic cell. The first and courth recombination sites, or the second and third recombination sites are identical. The first and second recombination site, and preferably are identical. The first and second recombination site, and preferably are identical. The first and second recombination site, and preferably are identical. The first and second recombination site, or the third and same recombination site. The vector is useful for producing large amounts of double-stranded RNA which can be used for silencing target nucleic are also as a second sequence. The vectors can also be used to convert a DNA fragment in the second sequence of double-stranded RNA which can be used to convert a DNA fragment in the second sequence of the convert and present and second sequence of the convert and second second second and sequence of the convert and second second second second convert and second second second second convert and second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ACTATGAATCAACTACTTAGATGGTATTAGTGACCTGTAGTCGACGACAGGCCTTCCAAA 13204

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         into an inverted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breeding scheme to produce more plants with the same characteristics or to introduce a chimeric gene for reduction of the phenotypic expression of nucleic acids. The present sequence represents an acceptor vector nucleotide sequence from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GCCAACTTTGTACAAAAAGCTGAACGAGAAACGTAAAATGATATAAATTTCAATATATTT

The present invention describes a vector (I) comprising operably linked DNA fragments having: (a) origin of replication allowing replication in a recipient cell, preferably in bacteria such as Bacherichia coll; (b) selectable marker region capable of being expressed in the recipient cell; and (c) a chimeric DNA construct comprising: (i) promoter or promoter or egion capable of being recognized by RNA polymerases of a eukaryotic cell or by prokaryotic RNA polymerase; (ii) first, second, third and courth recombination sites; (iii) 3' transcription terminating and polyadenylation region functional in the eukaryotic cell. The first and courth recombination sites, or the second and third recombination sites, are identical. The first and second recombination site, and preferably are identical. The first and second recombination site, or the third and same recombination sites, do not recombination site, or the third and same recombination site. The vector is useful for producing large amounts of double-stranded RNA which can be used for silencing target nucleic and sequences. The vectors can also be used to convert a DNA fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New vectors comprising operably linked DNA fragments having an origin of replication, a selectable marker and a chimeric DNA construct, useful for silencing target nucleic acids and for producing large amounts of double-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           into an inverted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breeding scheme to produce more plants with the same characteristics or to introduce a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAATTAGATTTTGCATAAAAAACGACTACATAATACTGTAAAACACAACATATCCAGTC 13144
polyademylation region functional in the eukaryotic cell. The first and fourth recombination sites, or the second and third recombination sites are capable of reacting with a same recombination site, and preferably are identical. The first and second recombination sites, or the third and fourth recombination sites, do not recombination sites, or the third and same recombination site. The vector is useful for producing large amounts of double-stranded RNA which can be used for silending target nucleic acid sequences. The vectors can also be used to convert a DNA fragment into an inverted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breading scheme to produce more plants with the same characteristics or to introduce a chimeric gene for reduction of the phenotypic expression of nucleic accordance from the present sequence represents an acceptor vector nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 741

New vectors comprising operably linked DNA fragments having an origin of replication, a selectable marker and a chimeric DNA construct, useful for silencing target nucleic acids and for producing large amounts of double-RNA

62-72; 104pp; English Claim 13; Page The present invention describes a vector (I) comprising operably linked CC DNA fragments having: (a) origin of replication allowing replication in a recipient cell, preferably in bacteria such as Escherichia coll; (b) selectable marker region capable of being expressed in the recipient cell cr and (c) a chimeric DNA construct comprising: (i) promoter or promoter cregion capable of being recognized by RNA polymerases of a eukaryotic cell or by prokaryotic RNA polymerase; (ii) first, second, third and control recombination sites; (iii) 3' transcription terminating and courth recombination region functional in the eukaryotic cell. The first and capable of reacting with a same recombination sites, or the second and third recombination sites are identical. The first and second recombination sites, or the third and contrib recombination sites, do not recombination sites, or the third and contributed RNA which can be used for silencing large amounts of double-stranded RNA which can be used for silencing large muchaic control or into an inverted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breeding scheme to produce more plants with the same characteristics or to introduce a chimeric gene for reduction of the phenotypic expression of nucleic conserved for acids requence represents an acceptor vector nucleotide sequence from the present invention

The present invention describes isolated nucleic acid molecules (I) encoding an attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, and attB2 nucleotide sequence. Also described are: (1) an isolated nucleic acid molecule (II) comprising one or more att recombination sites comprising at least one mutation in its core region that increases the specificity comprising one or more mutated att recombination sites of molecule (III) comprising one or more mutated att recombination sites of molecule comprising at recombination between a first nucleic acid molecule comprising a second recombination site and a second nucleic acid molecule att recombination site. (1), (III), primers, vectors and methods from the present invention are used for the recombinational cloning of nucleic acid molecules. They can be used for changing vectors, targeting gene products to intracellular locations, cleaving fusion tags from desired proteins, operably linking nucleic acid molecules of interest to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   regulatory genetic sequences, constructing genes for fusion proteins, changing copy number, changing replicons, cloning into phages and cloning. (I), (II), (III), host cells and vectors can be used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  production of polypeptides and antibodies. The present sequence is in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid, (b) causing some or all of the nucleic acid molecules of the first population to recombine with the first target nucleic acid molecules of nucleic so form a second population; (c) mixing the second population of nucleic acid with a second target nucleic acid, of nucleic acid with some or all of the second target nucleic acid, molecules to form a third population of nucleic acid. The method is useful for selecting and isolating nucleic acid. The method is useful for selecting and isolating nucleic acid. The method is useful for selecting and isolating nucleic acid molecules.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Moving an insert nucleic acid between vectors using site-specific recombination in vivo, useful for studying the biology of the organism, including array construction, reporter gene fusions, mutagenesis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention comprises a method for moving an insert nucleic acid molecule between vectors, the method involves moving an insert nucleic acid from one vector to another using site-specific recombination. The method of the invention is useful for studying the biology of an organism, including array construction, reporter gene fusions, mutagenesis, protein production and characterisation. The present DNA sequence represents the plasmid vector pMK2010 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ATGCCGTATTAAATCATAAAAAGAAAATAAGAAAAAAGAGGTGCGAGCCTCTTTTTTGTGTG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CGGGCCCCAAATAATGATTTTTTTTTTTGACTGATAGTGACCTGTTCGTTGCAACAAATTGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes isolated nucleic acid molecules (I) encoding an attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, and attB2 nucleotide sequence. Also described are: (I) an isolated mucleic acid molecule (II) comprising one or more att recombination sites comprising at least one mutation in its core region that increases the specificity comprising one or more mutated att recombination sites one mutated att recombination sites of in its core region that enhances the efficiency of recombination between a first nucleic acid molecule comprising at ecombination site and a second nucleic acid molecule comprising as second recombination site that interacts with the mutated comprising a second recombination site that interacts with the mutated att recombination site. (I), (III), primers, vectors and methods from the present invention are used for the recombinational cloning of nucleic acid molecules. They can be used for changing vectors, targeting desired proteins, operably linking nucleic acid molecules of interest to require the present comprise constructing genes for tusion proteins, changing convergence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3734
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CCTTCCAAATGTTCTTCTCAAACGGAATCGTCGTATCCAGCCTACTCGCTATTGTCCTCA 3914

concoding an attB1, attB2, attP1, attB2, attL1, attL2, attR1, and attR2

concolotide sequence. Also described are: (1) an isolated mucleic acid

molecule (II) comprising one or more att recombination sites comprising

concomprising one or more region that increases the specificity

comprising one or more mutated att recombination sites and a second att

comprising one or more mutated att recombination sites comprising at

comprising one or more mutated att recombination sites comprising at

comprising one or more mutated att recombination sites comprising at

comprising at second recombination site and a second mucleic acid molecule

comprising a second recombination site that interacts with the mutated

comprising a second recombination site that interacts with the mutated

comprising a second recombination site that interacts with the mutated

comprising a second recombination site that interacts with the mutated

comprising a second recombination site that interacts with the mutated

control mucleic acid molecules. They can be used for changing vectors, targeting

concleic acid molecules. They can be used for changing vectors, targeting

desired proteins, operably linking nucleic acid molecules of interest to

congress to intracellular locations, cloning into phages and

cloning (I), (II), (II), host colls and vectors can be used in the

production of polypeptides and antibodies. The present sequence is used

in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5325

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5325
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5085
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5445
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       · ·
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5505
                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid; (b) causing some or all of the nucleic acid molecules of the first population to recombine with the first target nucleic acid molecules of nucleic acid with a second population; (c) mixing the second population of nucleic acid with a second target nucleic acid, and (d) causing some or all of the nucleic acid molecules of the second population to recombine with some or all of the second target nucleic acid molecules to form a third population of nucleic acid. The method is useful for selecting and isolating nucleic acid molecules. The present sequence represents the donor plasmid pDONR207 nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                    Inserting a population of nucleic acids into a second target molecule for selecting and isolating nucleic acid molecules by mixing the second population of nucleic acid with a second target nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   480
                                                                                                                                                                                                          The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid, (b) causing some or all of the nucleic acid molecules of the first population to recombine with the first target nucleic acid molecules of nucleic acid with a second population, (c) mixing the second population of nucleic acid with a second incleic acid, and (d) causing some or all of the nucleic acid molecules of the second population to form a third population of nucleic acid. The method is useful for selecting and isolating nucleic acid molecules. The present sequence

```
The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid; (b) causing some or all of the nucleic acid molecules of the first population to recombine with the first target nucleic acid molecules to form a second population; (c) mixing the second population of nucleic acid with a second target nucleic acid, and (d) causing some or all of the nucleic acid molecules of the second population to recombine with some or all of the second target nucleic acid molecules to form a third population of nucleic acid. The method is useful for selecting and isolating nucleic acid molecules. The present sequence represents the destination plasmid phonNE212(F) nucleocide sequence

The present invention describes isolated nucleic acid molecules (I) encoding an attB1, attB2, attB1, attB2, attB1, attB2, attB1 and attB2 nucleotide sequence. Also described are: (1) an isolated nucleic acid molecule (II) comprising one or more att recombination sites comprising at least one mutation in its core region that increases the specificity of interaction between the recombination site and a second att recombination site, and (2) an isolated nucleic acid molecule (III) comprising one or more mutated att recombination sites comprising at least one mutation in its core region that enhances the efficiency of recombination between a first nucleic acid molecule comprising the mutated att recombination site and a second nucleic acid molecule comprising at comprising a second recombination site that interacts with the mutated att recombination site. (I) (III) primers, vectors and methods att recombination site. (I) (III) primers, vectors and methods from the present invention are used for the recombinational cloning of mucleic acid molecules. They can be used for changing vectors, targeting gene products to intracellular locations, cleaving fusion tags from desired proteins, operably linking nucleic acid molecules of interest to regulatory genetic sequences, constructing genes for fusion proteins,
                                                                                                                                                                                                                                                            CAGACCGGAGATATTGACATCATATATGCCTTGAGCAACTGATAGCTGTCGCTGTCAACT 1140

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 3, Al
